Why Major in Physics?
Top Ten List

10. Potential mates flirt harder if they think you understand quantum entanglement.

9. So you’ll have a guaranteed conversation-killing reply close at hand when an unwanted pick-up artist asks, “Hey, babe, what’s your major?”.

8. Because you liked taking toys apart when you were a kid and now you get to do it for pay, with much bigger toys.

7. So you can go to grad school in about anything you bloody well want, like....

6. What? ...and leave the nation without an ample supply of sci-fi movie critics to point out things like, “You know, you really can’t hear explosions in space”?

5. To have something to bargain with when the alien Brain Merchants from Nebulon Six invade the earth.

4. So that you have lots of options when your kids start to ask why the sky is blue.

3. Because you don’t think that you stand out enough as a tree-hugging, gun-toting, multiply-pierced Trekkie vegan with a penchant for gospel music and video games.

2. You want to make the world a better place to live.

And the Number One reason to major in physics:
1. Because you really like it!
