Knowledge vs. Belief

“Knowledge” – considered “content knowledge”, “literacy” or “conceptual understanding” in science education circles.

- Facts, vocabulary, concepts, mental models are fundamental building blocks for understanding
(and now computer simulations)
- Science, and scientists, build knowledge
- We are comfortable communicating it

“Belief” - Trust or confidence in some thing that is not immediately susceptible to rigorous proof

- Beliefs are strongly tied to what a person values, often with religious overtones.
- Scientists value science and knowledge created.
- Belief stems from one’s knowledge, study and experience.

After notes by Prof. Steve Anderson, University of Northern Colorado

Where to get reliable information about minimalist arguments:

See <http://skepticalscience.com/argument.php>
or see the blog at <http://www.realclimate.org/>

The human element

- Population
 - UN projections
- Affluence
 - Economics of growth
 - Closely correlated with energy use
- Attitudes
 - Yale Project on Climate Change Communication
 - <http://environment.yale.edu/climate-communication/>

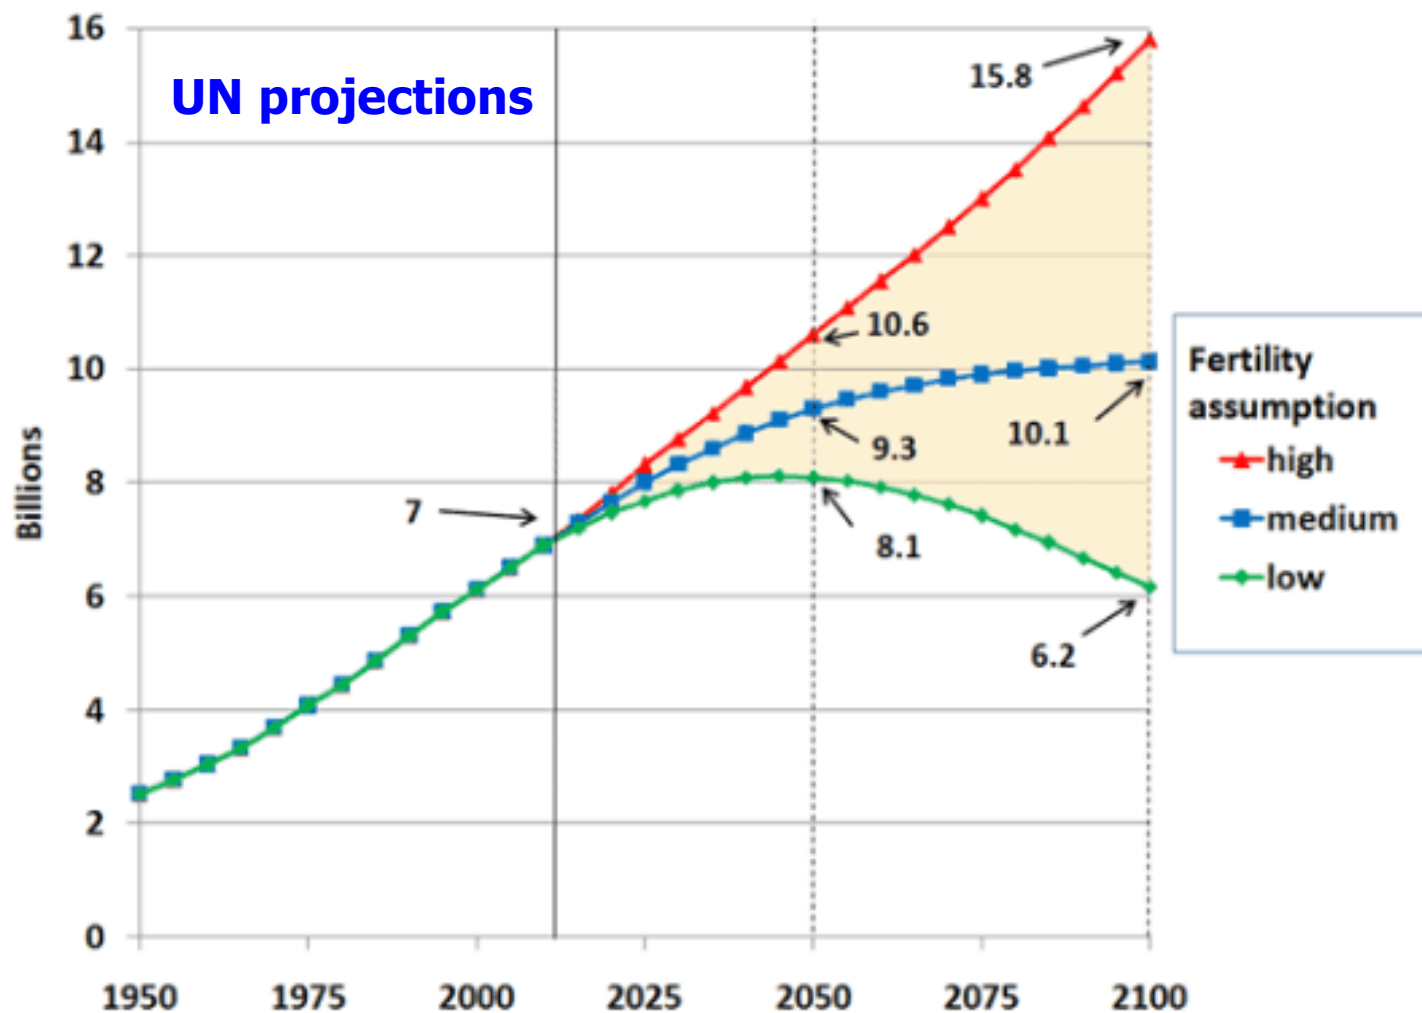

- “It’ s hard to make predictions, especially about the future.”

Lawrence Peter "Yogi" Berra

ZPG by 2040?? by 2100? never?

UN Projections of World Population Under Three Fertility Assumptions

Just stabilizing the CO₂ emissions will be an enormous challenge!

$$\text{CO}_2 \text{ emissions} = \text{Carbon content of the Energy} * \text{Energy efficiency of economy} * \text{Individual affluence} * \text{Population}$$

Population goes up (empower women). ↑

Can we get along with less individual wealth? Economic growth goes up to create prosperity and eliminate poverty (e.g. China). ↑

Run the economy on less energy (aka conservation). ↓

Reduce the carbon content of the energy. ↓

Small subset of people

- Anti-action activists
- The anti science group
- Working for vested interests trying to avoid or delay government action to try and do something to ameliorate the problem
- Tobacco industry example

Where are you on this scale?

<http://climatecommunication.yale.edu>

Proportion represented by area

Source: Yale Project on Climate Change Communication

If you are willing, please write the word that describes you personally on a piece of paper and put it in the basket as it goes around.

Do not put your name – this is an anonymous survey.

Will humans be like the frog?

People will “get it”.

Often quoted

John Adams

“Facts are stubborn things; and whatever may be our wishes, our inclinations, or the dictates of our passion, they cannot alter the state of facts and evidence.”

John Adams, US diplomat & politician (1735 - 1826)

'Argument in Defense of the Soldiers in the Boston Massacre Trials,' Dec. 1770

Distrust of science

Huffington Post Poll 12/21/2013

Percent

- 36%
- 51%
- 6%
- 7%

Trust

- a lot
- a little
- none
- no response

See Shawn Otto, 2011 *Fool Me Twice: Fighting The Assault On Science In America* (Rodale Books), especially Chapter 7, American Antiscience.

Conservatives: Fundamentalism and the religious right, evangelicals, creationists, biblical literalists, etc.

Liberals: Postmodernism, "no such thing as objective truth", "New age" thinking, alternative realities, etc.

Why can't we convince everyone about climate change?

For this see the book

*Don't Even Think About It;
Why Our Brains Are Wired
to Ignore Climate Change*

by George Marshall
(2014, Bloomsbury)

It's a fascinating read and
sociologically important.

denier, noun

1. a unit of weight by which the fineness of silk, rayon, or nylon yarn is measured, equal to the weight in grams of 9,000 meters of the yarn and often used to describe the thickness of hosiery.
 - "840 denier nylon"
2. *historical* a French coin, equal to one twelfth of a sou, which was withdrawn from use in the 19th century.
3. a person who denies something.
 - "a prominent denier of global warming"

FIGURE 1. Crude death rate* for infectious diseases — United States, 1900–1996[†]

*Per 100,000 population per year.

[†]Adapted from Armstrong GL, Conn LA, Pinner RW. Trends in infectious disease mortality in the United States during the 20th century. JAMA 1999;281:61–6.

CO₂ as waste

Atmosphere (“global commons”) waste dump

- Solid waste produced annually about 1 billion metric tons
- Fossil fuel burning -> 30 billion metric tons/year
$$(30 \times 10^9)/(300 \times 10^6) = 100$$

Anthropogenic Sources of CO₂

2007 emissions: Population matters!

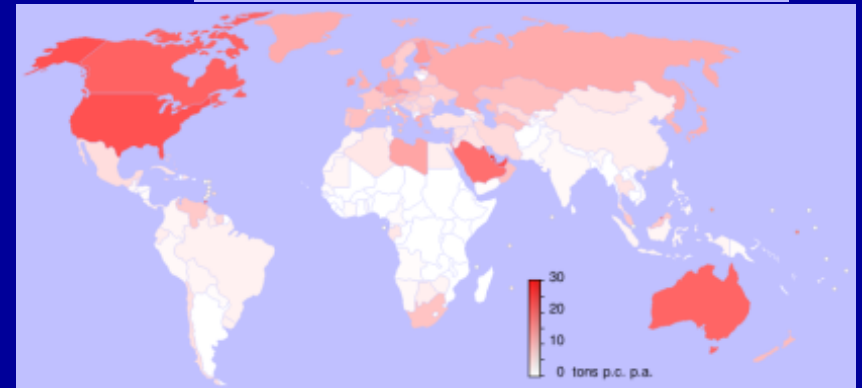

China biggest emitter

- 14% more than US

• Per capita		Pop.
U.S.:	19.4	0.31
Russia:	11.8	0.14
E. U.:	8.6	0.50
China:	5.1	1.33
India:	1.8	1.14
	tons	Billions

Tons of CO₂ per capita

Netherlands Environmental
Assessment Agency 2008

Compare 2007 and 2015 emissions:

China biggest emitter

- 14% more than US

• <u>Per capita</u>		<u>Pop.</u>
U.S.:	19.4	0.31
Russia:	11.8	0.14
E. U.:	8.6	0.50
China:	5.1	1.33
India:	1.8	1.14
	tons	Billions

China biggest emitter

- 75% more than US

• <u>Per capita</u>		<u>Pop.</u>
U.S.:	19.8	0.32
Russia:	16.2	0.14
E. U.:	8.8	0.50
China:	8.1	1.37
India:	2.4	1.25
	tons	Billions

Why it's not hopeless

- Chart of the year: 'Incredible' price drops jumpstart clean energy revolution
 - New DOE report details latest advances in solar, wind, LED lights, batteries, and electric cars.

Why it's not hopeless

Supercharging the Grid with Batteries

DOE projects "the total domestic energy storage market could be worth \$2.9 billion by 2021, as compared to \$350 million in 2015."

<https://thinkprogress.org/clean-energy-revolution-now-81a8e61134c7#.xqdfaa8cs>

Good news

In 2010, more was invested in renewables than in extracting more ancient hydrocarbons, globally.

- Renewable: \$187 billion
- Ancient hydrocarbons: \$157 billion

<http://www.bloomberg.com/news/articles/2011-11-25/fossil-fuels-beaten-by-renewables-for-first-time-as-climate-talks-founder>
