Text:

General:
Lab is scheduled from 2:00 to 5:30 on M, Tu, or W afternoon, or 6:00 to 9:30 on Tu evening. Please come, on time, to your assigned lab section. Attendance will be taken. Each lab will begin with a brief introduction to the experiment to be done that day.

The schedule of experiments for the quarter is attached. Please read the assigned sections in your lab book before coming to lab. Also read the "Required Reading" sections that are indicated for each experiment. This will enable you to follow the introduction more easily. If you read ahead and plan your time well, you will find it easy to complete the experiments in the allotted time or less. Planning ahead will also enable you to use your time most effectively.

Safety:
READ PP. 4-20 IN YOUR LAB TEXT.
The organic laboratory is a potentially dangerous place. However, no accidents need occur if you are careful and are constantly aware of what you are doing and why. Read the directions given in each experiment carefully and in advance. Pay particular attention to the "Special Instructions" that are described for each experiment. Make sure you understand each step of the experimental procedure and any potential dangers. If you have questions, ask! Use your common sense and, above all, THINK!

The following safety rules will be in effect at all times:

1. Safety glasses must be worn at all times.

2. Wear proper attire; gloves and lab coats when necessary; shoes (no sandals); no shorts.
3. No flames or smoking allowed in the lab.

4. No food or drink allowed in the lab.

5. No horseplay allowed in the lab.

6. Keep all work areas clean and orderly. This includes your bench, the reagent table and the hoods. Clean up all chemical spills immediately.

7. Use proper disposal procedures, as specified by your TA, for all chemicals and solutions.

8. Be careful to avoid contaminating the reagents. Close all containers snugly after use.

9. Be sure to read the labels on chemical containers carefully. Many chemical names are very similar.

10. Most organic chemicals are toxic to some extent. Treat them all with respect. Avoid getting them on your skin or clothing and avoid extensive breathing of their fumes. Work in the hoods when the experimental directions so instruct.

11. No students are allowed in the lab unless the TA is present. Only students assigned to that lab section are allowed in the lab. No student is allowed in the stockroom without explicit permission of the TA.

12. No chemicals, glassware or equipment are to be removed from the lab. No unauthorized experiments are to be done.

**Notebooks:**
You must have a bound lab notebook. You may use the same notebook and the same style as last quarter.

**Prelabs:**
Prelabs are to be done in the same manner as last quarter.

**Reports:**
Reports are to be done in the same manner as last quarter.

**Products:**
For synthesis experiments, submit the product in a clean, labelled vial along with the report. The label should have your name and the structure, weight, percent yield and mp or bp range of the product.
Grading:

Your grade will be based on a total of 1000 points, distributed as follows:
Pre-lab write-ups, 10 pts./exp. 60 points
Completion of experiment, 20 pts./exp. 180 points
Lab reports and products (if applicable) 80 pts./exp. 720 points
Lab notebook, other than pre-lab write-ups 40 points
Schedule of Laboratory Experiments
Fall Quarter, 2002

Week of Sept. 9
Check-In
Experiment 1  Synthesis of Benzocaine
   Read pp. 346-351. Do Experiment 41. Do not do the recrystallization nor obtain
   the spectra of the benzocaine.

Week of Sept. 16
Experiment 2  Synthesis of N,N-Diethyl-m-toluamide
   Read pp. 366-378. Do Experiment 45.

Week of Sept. 23
Experiment 3  The Aldol Condensation
   Read pp. 316-319. Do Experiment 35.

Week of Sept. 30
Experiment 4  Preparation of 1,4-Diphenyl-1,3-butadiene
   Read pp. 333-338. Do Experiment 28. Do Part A, the preparation of
   benzyltriphenylphosphonium chloride (Wittig salt) this week. Save the Wittig salt and
   use it to complete the synthesis next week. During the reflux period you will have time
   to do Experiment 5.

Experiment 5  Simulated Identification of an Unknown
   Read pp. 428-434. There is no prelab required for this experiment. This lab is a
   computer simulation of the real experiment you will do at the end of the quarter. You
   will be assigned two unknown organic compounds to identify on the computer. In order
   to identify each compound you must tell the computer which test to run on the
   unknown. The computer provides you with the result of the test. You then have to
   decide what test to run next. You continue this process until you have identified the
   compound. Since the "tests" on the computer can be done easily, this experiment
   allows you to hone your skills before undertaking the real thing. Make sure to interpret
   the IR and NMR spectra of your unknown if they are available. Record the results of
   each test just as though this is an experiment done in the lab. Your report should
   include a complete write-up of the identification of one unknown, just as thought the
   procedures were actually done in the lab. Also include the identity of the other unknown
   that you were assigned.

Week of Oct. 7
Complete Experiment 4
   Read pp. 333-338. Do Experiment 38, Part B.

Week of Oct. 14
Experiment 6  Relative Reactivities of Aromatic Compounds
   Read pp. 338-342. Do Experiment 39.
Week of Oct. 21
Experiment 7  Friedel-Crafts Acylation
Read pp. 493-499. Do Experiment 58, using toluene, ethylbenzene, or anisole as the starting material. Do not do the vacuum distillation. You will use NMR spectroscopy to identify which position has been acylated in your product.

Week of Oct. 28
Experiment 8  Identification of an Unknown
There is no prelab for this experiment. This time you will be given a sample of a real unknown to identify. It will be one of the compounds listed in the tables in Appendix 1 (pp. A2-A10). Follow the procedure outlined on pp. 428-468 in your lab text. You must do PART ONE, steps 1, 2, 4, and 6 (at least one positive and definitive functional group test), PART TWO, and PART THREE step 9 (prepare one solid derivative whose mp confirms the identity of your unknown) and step 10. This is a two-week experiment and the report counts twice the normal amount.

Week of Nov. 11
Clean Up, Check Out
You must check out of lab at this time, turn in your breakage card and pay for any equipment you have broken or you will receive an I as your lab grade. Do not forget to turn in your lab notebook.
